### Statistical Natural Language Processing

Çağrı Çöltekin /tʃaːrˈttt tʃæltecˈɪn/ ccoltekin@sfs.uni-tuebingen.de

> University of Tübingen Seminar für Sprachwissenschaft

Summer Semester 2020

# Application examples

Just a few examples

For profit (engineering):

- Machine translation
- · Question answering
- · Information retrieval
- · Dialog systems
- Summarization
- · Text classification
- Text mining/analytics
- Speech recognition and synthesis
- · Automatic essay grading
- Forensic linguistics

Ç. Çöltekin, SfS / University of Tübinger

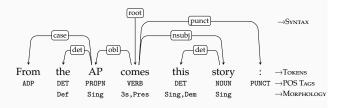

For fun (research):

- · Modeling language processing learning
- · Investigating language change through time and
- Aiding language documentation through text processing
- Automatic corpus annotation for linguistic research
- Stylometry, author identification

Summer Semester 2020 2 / 31

Motivation Overview Practical matters Next

### Annotation layers: an example

Ç. Çöltekin, SfS / University of Tübinger

Motivation Overview Practical matters Next

### Do we need a pipeline?

- Most "traditional" NLP architectures are based on a pipeline approach:
  - tasks are done individually, results are passed to upper
- Joint learning (e.g., POS tagging and syntax) often improves the results
- End-to-end learning (without intermediate layers) is another (recent/trending) approach

### Why study (statistical) NLP

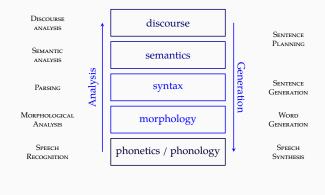

- (Most of) you are studying in a 'computational linguistics' program
- Many practical applications (NLP)
- · Investigating basic scientific questions, primarily in linguistics and cognitive science (CL)

Ç. Çöltekin, SfS / University of Tübingen

Summer Semester 2020 3 / 31

Motivation Overview Practical matters Next

# Layers of linguistic analysis

Motivation Overview Practical matters Next

### Typical NLP pipeline

Ç. Çöltekin, SfS / University of Tübing

- Text processing / normalization
- · Word/sentence tokenization, segmentation
- POS tagging
- Morphological analysis
- Syntactic parsing
- · Semantic parsing
- · Named entity recognition
- · Coreference resolution

Ç. Çöltekin, SfS / University of Tübinger

Motivation Overview Practical matters Next

### On the word 'statistical'

But it must be recognized that the notion 'probability of a sentence' is an entirely useless one, under any known interpretation of this term. — Chomsky (1968)

- Some linguistic traditions emphasize(d) use of 'symbolic', rule-based methods
- Some NLP systems are based on rule-based systems (esp. from 80's 90's)
- Virtually, all modern NLP systems include some sort of statistical component

Ç. Çöltekin, SfS / University of Tübingen C. Cöltekin. SfS / University of Tübingen Summer Semester 2020 6 / 31 Summer Semester 2020 • Combinatorial problems - computational complexity

## NLP and computational complexity

- How many possible parses a sentence may have?
- How many ways can you align two (parallel) sentences?
- · How many operations are needed for calculating probability of a sentence from the probabilities of words in
- Many similar questions we deal with have an exponential
- · Naive approaches often are computationally intractable

Motivation Overview Practical matters Next

### Combinatorial problems

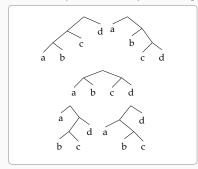

What is difficult with NLP?

• Ambiguity

• Data sparseness

A typical linguistic problem: parsing

How many different binary trees can span a sentence of N words?

words	trees
2	1
3	2
4	5
5	14
10	4862
20	1767 263 190
•••	•••

Motivation Overview Practical matters Next

### More ambiguities

we do not recognize many of them at first read

- Time flies like an arrow; fruit flies like a banana.
- Outside of a dog, a book is a man's best friend; inside it's too hard to read.
- One morning I shot an elephant in my pajamas. How he got in my pajamas, I don't know.
- Don't eat the pizza with knife and fork; the one with anchovies is better.

Ç. Çöltekin, SfS / University of Tübingen

Motivation Overview Practical matters Next

### Statistical methods and data sparsity

- Statistical methods (machine learning) are the best way we know to deal with ambiguities
- Even for rule-based approaches, a statistical disambiguation component is often needed
- We need (annotated) data to learn, but ...

Motivation Overview Practical matters Next

### NLP and ambiguity

fun with newspaper headlines

FARMER BILL DIES IN HOUSE TEACHER STRIKES IDLE KIDS SQUAD HELPS DOG BITE VICTIM BAN ON NUDE DANCING ON GOVERNOR'S DESK KIDS MAKE NUTRITIOUS SNACKS DRUNK GETS NINE MONTHS IN VIOLIN CASE MINERS REFUSE TO WORK AFTER DEATH PROSTITUTES APPEAL TO POPE

### Even more ambiguities with pretty pictures

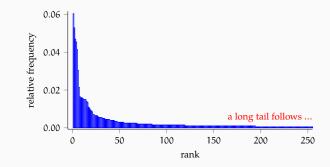

Ç. Çöltekin, SfS / University of Tübingen

Ç. Çöltekin, SfS / University of Tübingen

Motivation Overview Practical matters Next

# Languages are full of rare events

word frequencies in a small corpus

Ç. Çöltekin, SfS / University of Tübingen

- Combinatorial problems computational complexity
  - Often we resort to approximate methods: the answer to 'what is a good approximation?' comes from ML.
- Ambiguity
  - The answer to 'what is the best choice?' comes from ML.
- Data sparseness
  - Even here, ML can help.

Ç. Çöltekin, SfS / University of Tübingen

Summer Semester 2020 18 / 31

C. Cöltekin, SfS / University of Tübingen

What is in this course

tools in NLP

· Some applications of NLP

Motivation Overview Practical matters Next

• Quick introduction / refreshers on important prerequisites

• The computational linguist's toolbox: basic methods and

### What is in this course

NLP Tools and techniques

- · Tokenization, normalization, segmentation
- N-gram language models
- · Part of speech tagging
- Statistical parsing
- · Distributed representations (of words, and other linguistic objects)

Ç. Çöltekin, SfS / University of Tübinger

Motivation Overview Practical matters Next

### What is not in this course

- Cutting edge, latest methods & applications
- In-depth treatment of particular topics
- Introduction to terms / concepts from linguistics

Ç. Çöltekin, SfS / University of Tübingen

#### Logistics online classes

- Interaction is still important
  - Do not hesitate to ask questions during the online lectures
  - Asynchronous discussion via 'issues' at https://github.com/snlp2020/snlp

Motivation Overview Practical matters Next

- This is new to all of us, we will learn how to handle it as we
- Please provide feedback, suggestions the instructors/tutors need it even more than before
- · For of the lab sessions is particularly unclear

Motivation Overview Practical matters Next

# What is in this course

Preliminaries

- Linear algebra, some concepts from calculus
- Probability theory
- · Information theory
- Statistical inference
- Some topics from machine learning
  - Regression & classification
  - Sequence learning

  - Unsupervised learning... but what about 'deep learning'?
  - Short answer: we will cover the basics

Ç. Çöltekin, SfS / University of Tübinger

Motivation Overview Practical matters Next

### What is in this course

Applications

- · Text classification
  - sentiment analysis
  - language detection
  - authorship attribution

If time allows

- Statistical machine translation
- Named entitiy recognition
- Text summarization
- Dialog systems

Ç. Çöltekin, SfS / University of Tübingen

Motivation Overview Practical matters Next

### Logistics

- Lectures: Mon/Fri 12:15 in Hörsaal 0.02 online
- Practical sessions: Wed 10:15 in Hörsaal 0.02 online
- Office hours: Mon 14:00-15:00 (room 1.09) by appointment  $(email\ ccoltekin@sfs.uni-tuebingen.de)$
- Course web page: https://snlp2020.github.io/
- We will use GitHub classroom in this class (more on this soon)

C. Cöltekin. SfS / University of Tübingen

Summer Semester 2020 22 / 31

C. Cöltekin, SfS / University of Tübingen

Summer Semester 2020 23 / 31

### Reading material

- Daniel Jurafsky and James H. Martin (2009). Speech and Language Processing: An Introduction to Natural Language Processing, Computational Linguistics, and Speech Recognition. second. Pearson Prentice Hall. ISBN: 978-0-13-504196
  - Draft chapters of the third edition is available at http://web.stanford.edu/~jurafsky/slp3/
- Trevor Hastie, Robert Tibshirani, and Jerome Friedman (2009). The Elements of Statistical Learning: Data Mining, Inference, and Prediction. Second. Springer series in statistics. Springer-Verlag New York. isbn: 9780387848587. url:

Assignments

Grading / evaluation As a BA course (Proseminar)

Moodle)

• Final exam (40%)

use GitHub Classroom

points indicated

one week from deadline

Tutor: Maximilian Gutsche

during practical sessions

• Python 3 is strongly recommended

You have unlimited trials

Motivation Overview Practical matters Next

• For distribution and submission of assignments, we will

• You are encouraged work on the assignments in pairs, but

• Late assignments up to one week will be graded up to half

• The solutions will be discussed in the tutorial session after

• We have a match-making system for working in random

learning/using git well is strongly recommended

you can work with the same person only once

Motivation Overview Practical matters Next

• Make sure you have a working Python interpreter

· We need your opinions: how to hold lab sessions?

• You are encouraged to ask questions about the exercises

 $\bullet\,$  The solutions will be discussed during tutorial sessions

· The amount of git usage required is low, but

• 7 graded assignments (6-best counts, 10 % each)

Quizzes with T/F or multiple choice questions (on

– Weekly, covering topics from the previous week You have to get all questions correct

• Up to 5 % additional bonus points for Easter eggs:

If you complete all, you get 5 bonus points, each quiz missed reduces the bonus by one point

bonus points for spotting unintentional mistakes

first person finding mistakes in the course material gets  $1\,\%$ 

Easter eggs are intentionally placed, but you may also get

## Motivation Overview Practical matters Next

### Grading / evaluation For master's students

- You can take the class as a 'Proseminar' for 6ECTS, with the same requirements
- You can take the class as a 'Hauptseminar' (HS) for (only) 9ECTS with an additional project/paper related to the topics taught in the class
- If you choose the HS option, contact me with your project ideas as soon as you get some ideas

Ç. Çöltekin, SfS / University of Tübingen

Summer Semester 2020 26 / 31

Ç. Çöltekin, SfS / University of Tübingen

Practical sessions

groups

Motivation Overview Practical matters Next

### Assignment 0

- Your first assignment is already posted on the web page
- By completing assignment 0, you will
  - register for the course
  - have access to the non-public course material
  - exercise with the way later assignments will work
  - provide some data for future exercises

Motivation Overview Practical matters Next

- The repository created for assignment 0 is private, and can only be accessed by you and the instructors
- Please make sure that your assignment passes the tests (there are two 'pytest' tests in 'tests/' folder)

Ç. Çöltekin, SfS / University of Tübingen Summer Semester 2020 28 / 31

Ç. Çöltekin, SfS / University of Tübingen

Motivation Overview Practical matters Next

# Further git/GitHub usage

- Once you complete Assignment 0, you will be a member of the 'organization' snlp2020
- · You will get access to
  - private course material
  - assignment links
  - news and announcements

through the repository at https://github.com/snlp2020/snlp

- · Make sure you are watching this repository
- You are also encouraged to use 'issues' in this repository as a place to discuss course topics, ask questions about the material and assignments

Next

Fri Mathematical preliminaries (some linear algebra and bits from calculus)
